PROCESSO DE PINTURA ELETROSTÁTICA

ELECTROSTATIC PAINT PROCESS

A pintura é realizada por lacagem, que consiste num processo de pintura eletrostático executado com tintas em pó.

Este processo, bem como o tratamento a que as peças são sujeitas, reforça a proteção anticorrosiva e maximiza a aderencia e duração da tinta.

No nosso processo de lacagem dispomos de 9 cores diferentes para as suas proteções.

Um processo simples, eficaz e resistente.

The painting is carried out by the lacquering method which consists of an electrostatic painting process performed with powder paints.

This process, together with a final treatment technique applied to the pieces, reinforces the anti-corrosion protection and maximizes the paint adhesion and duration.

With this lacquering process we have 9 different colors for the protections.

A simple, effective and resistant process.
