El PINLOCK es una pantalla anti-empañante para el casco que se ha convertido en una inversión indispensable. El nombre "pin" define su sistema de sujeción. Son 2 pequeños remaches excéntricos colocados a ambos lados.

¿Cómo funciona?
El vaho hace que el vapor de aire interior se deposite en forma de mini-gotas que reducen enormemente la transparencia del visor. El sistema **pinlock** consiste en adherir a la cara interna del visor una segunda pantalla, igualmente transparente, en forma de lámina. Así, al formarse una capa intermedia de aire que las aísla, se impide dicho contraste.

The PINLOCK is an anti-fog helmet screen that has become an indispensable investment. The "pin" takes its name from its fastening system. It is a pair of small eccentric rivets placed on both sides.

How does it work?
The fog causes the interior air vapor to settle in the form of mini-drops that greatly reduce the transparency of the viewfinder. This system **pinlock** consists of adhering to the internal face of the viewfinder a second, equally transparent, sheet-shaped screen. Thus, by forming an intermediate layer of air that isolates them, this contrast is prevented.
